

CSC 82010 UNIX Application Development
Professor Stewart Weiss
Fridays, 200 – 4:00 pm

A.2. Description: A student taking this course will learn how to design and structure applications that use the UNIX kernel's application programming interface, and will learn the structure of that interface and the operating system itself. In addition to a few programming projects, there will be a research project that will require the student to focus on a particular aspect of the system. There are no exams in the class.
