Spring 2021 Colloquium

Wednesday, March 24, 2021

2:45pm-4:00 p.m., [via ZOOM](#)

Bill Idsardi

Time and order in speech and phonology

Time and temporal order are often represented only implicitly in phonological diagrams. In this talk I argue from several perspectives that the basic ordering relation for speech and phonology is $<$, which does not require temporal contiguity. Several phenomena are analyzed using directed graphs which explicitly represent gappy bigram relations between elements.
